BETER VENNOOTSKAPPE. BETER PRESTASIE

Is jy op soek na 'n maatskappy wat jou boerderybehoefte verstaan? Wat jou visie van beter opbrengste en optimale prestasie deel? **AECI Plant Health het die antwoorde.**

Met 'n wye reeks volhoubare oplossings wat die natuur se potensiaal ontsluit, tesame met sterk tegniese ondersteuning, help **AECI** jou om jou gewasprestasie te verbeter. As een van die grootste verspreiders van landbouchemiese produkte in Suid-Afrika met 'n netwerk van meer as 185 gewasadviseurs, is ons die perfekte vennoot op jou plaas.

ONE AECI – VIR 'N BETER WÊRELD.

Kontak vandag nog jou gewasadviseur.

Spring is officially in full swing, and whilst we're still experiencing periodic bouts of cold spells and intrusive natural anomalies throughout the country, we are enjoying the change of season. We've been working extra hard at

the October | November 2023 edition of the AGRIFOODSA Magazine, and to keep ourselves and our businesses thriving in an unpredictable world, but we've also taken some time to enjoy the distinct sights, sounds, and smells of spring in our small corner of the earth. I've never seen such determination and creativity to persevere in the face of adversity, to extend a helping hand where it's needed, and to find simple pleasures in everyday life.

Our cover featured advertiser for this edition is World Focus Agri. World Focus Agri will help you enhance plant vitality, while protecting the environment and restore your land. They provide support for the agricultural community, maximizing harvests of all crops through the process of introducing a natural product into the biological lifecycle. They concentrate on developing and producing organic, as well as biologic growth stimulants and enhancers via root and leaf applicants. World Focus changes the conventional view of plant protection to plant health via the biology. To find out more about their products and services, go to www.worldfocusagri.co.za

Visit the AGRIFOODSA.INFO website (www.agrifoodsa.info) for more information on the agricultural and food industries, and keep an eye out on all of our socials for news, competitions, Advertiser Showcases, and helpful articles. Our AGRIFOODSA Newsletter also features our digital magazine, broadcasts and more.

Wishing you a refreshingly happy spring and all the best for the time ahead.

Best wishes,

Chantell de Bruin

SURVEY & DESIGN OF ALL IRRIGATION SYSTEMS,
DAM DESIGN REGISTRATION, DAM SEALS
AND ALL WATER RELATED STUDIES

PIVOT OPTIONS

TOWABLE SYSTEMS

- Movable or towable units are always moved in the direction of the machine itself. The movable pivot rides upon a trolley and the wheels can be set pointing perpendicular to the shaft, for movement.

PERMAPIPE

- The spans provide the solution for corrosion problems by lining the internal surface of its galvanized pipes with a high-density polyethylene (HDPE).
- Lined pipe with HDPE does not require gaskets between flanged pipes because of the unique mold-flange technology, which makes sealing an integral part of the liner material.

For more information check Permapipe catalogue.

FERTIGATION EQUIPMENT

- Fertigation equipment comprises a dosing pump that can be regulated (percentage) and an electrical stirrer, together with the corresponding accessories for injecting the fertilizer into the main water flow.
- The most common flows for dosing pumps are 200, 300 and 500 litres/hour, although others are available.
- The system can be placed at the head of the water supply or the foot of the pivot.

iControlRemote

- It is a remote irrigation management product that uses GSM technology to monitor and manage your irrigation systems.
- iControlRemote.com website allows you to monitor the current status of your irrigation systems including current end pressure, speed percentage, angle, endgun, total hours running and total hours with water.

For more information check iControlRemote catalogue.

Sustaining existing trade partnerships and finding new markets are imperative for South African agriculture.

John Hudson, Head of Agriculture at Nedbank Commercial Banking.

South Africa (SA) is in the enviable position of being a net exporter of agricultural products. Aside from the obvious contribution this makes to SA's GDP and job creation, this, combined with excellent local production and 2 prior years of record exports, are the main reasons why SA has been able to ensure food security and curb food price inflation compared to the rest of the world.

As SA's agriculture is export-orientated, the focus must be on safeguarding its seamless continuation. Attention should be centred on improving logistics efficiency, intensifying the promotion of South African products in export markets, and sustaining solid relations with existing critical export markets while securing expansion into new markets. This is particularly important in the context of growing tensions between the East and the West – as highlighted by the potential loss of SA's benefits through the United States (US) African Growth and Opportunity Act (also known as AGOA) – and more onerous regulations being imposed by the European Union (EU).

One of these potential issues is the objective of the European Green Deal to reduce the environmental and carbon footprint in the way food is produced and consumed in the bloc. An obvious challenge here is South Africa's dependence on fossil fuels, which is unlikely to meet the criteria required for EU targets. However, equally problematic is the EU's ever more stringent regulations, with the high cost of compliance likely to negate the benefits of our existing preferential trade arrangements with the region.

A case in point is the EU's decision to institute cold treatment requirements for orange imports originating from Southern Africa in June last year – a ruling that was allegedly made to protect against false codling moth that feeds on many crops, including citrus. The impact of this decision would be dire for South Africa's citrus farmers, who send up to 800 000 tons of produce per year to the EU. Additional costs and potential loss of income may amount to more than R500 million in 2023, while investment in cold storage technology and capacity of nearly R1,4 billion will be required to enable full compliance.

The citrus sector currently sustains 140 000 jobs and brings in R30 billion in export revenue annually. However, projected growth will potentially enable the industry to sustain a further 100 000 jobs and generate an additional R20 billion in annual revenue – but it is clear that additional markets need to be sought for these exports to mitigate against potential loss in the EU market.

These threats highlight the importance of nurturing existing partner relationships while aggressively developing new markets in both the East and West. Currently, South Africa only has free trade agreements (FTAs) in two of South Africa's biggest markets – Africa and Europe – which collectively account for 62% of total agricultural exports. The Middle East, Asia, the Americas and the UK currently account for 36% and are perhaps where attention is critical. Some of South Africa's fiercest competition is from other 'Global South' producers, which have various trade agreements in place with third markets in Asia, the Middle East, and the Americas. The fact that these countries have either preferential or bilateral trade agreements, means that SA is effectively facing higher tariffs against our key competition in these markets. In turn, this means that local producers must overcome tariffs primarily through farm-level efficiency.

Nedbank does not shy away from working on challenges that hinder the potential of the agricultural sector, such as these, and we embrace the opportunities they present. We collaborate with key organisations and stakeholders to enhance depth of understanding, and, by combining this with a long-term and client-centred approach, we gain a 360-degree view of the unique risk drivers, as well as mitigation and growth strategies of our clients' agribusinesses and the entire sector.

Think bigger.

Think Nedbank Commercial Banking.

Email us at agriculture@nedbank.co.za to find out more.

WATERKRIP VEEDOSERINGSTABLETTE PARASIEET BEHANDELING

VOORDELE VAN WATERKRIP DOSERING:

- Geen arbeid nodig. Voeg slegs 20 tablette vir elke 250 liter water in 'n 300ml koeldrank botteltjie met 4 x 8 ml gaatjies in en heg aan die "ball valve" vas. Stadig oplosbare tablet wat tot 7 dae effektief is. Water kan roesbruin verkleur.
- Ryk aan aminosure wat vinniger horing groei by wild sal aanhelp, as gevolg van daaglikse inname.
- Doseer ook alle wilde voëls en diere bv. Tarentale, Fisante, Steenbokke en Duikers ens. Hulle drink ook by die waterkrip en is van die grootste parasiet draers wat die veld vol parasiete laat, nou word die veld diere vir die eerste keer ook gedoseer.

"NB! Die EKO tablette is en bly maar die antwoord vir swak chemiese middels wat verantwoordelik is vir die parasiet weerstandigheid by ons diere.

SYNOPSIS OF THE 2023 FERTASA SOIL FERTILITY AND PLANT NUTRITION SYMPOSIUM

 THE TOPIC OF THE SYMPOSIUM WAS "PLANT NUTRITION:
 NEW DIMENSIONS IN TECHNOLOGICAL AND AGRONOMICAL ADVANCES"

Professor Patrick Brown gave an in-depth presentation dealing with the role of microbial and non-microbial biostimulants in the growth of crops. He stressed that these products are there to enhance natural processes in plants to adapt to different conditions.

Do these products work?

- Many of them don't, but some are extremely valuable.
- Biostimulants are designed to solve a particular stress condition or to enhance the uptake of nutrients
 - What stress are you concerned about
 - What nutrients are you attempting to enhance
- Biostimulants have many different functions and many different origins. There are no common rules to explain them all
 - Aspirin might help your headache, but it won't help your diabetes
- Knowledge of the agronomy of your crop and some plant biology and soil science will help you make sound decisions.

Testing biostimulants is very difficult and many 'results' cannot be trusted and may not be relevant to your crop. (Use rules 1-4). Some biostimulants are remarkable and this is a field of great promise!

Two prominent theories exist:

Stress Mitigation: Agricultural Crops frequently do not achieve full yield potential due to environmental stress events. Biostimulants can help overcome prepare the plant for these stresses

- Biostimulants improve stress tolerance and minimize crop yield loss

Nutrient Uptake: The efficiency of nutrient use in most agricultural systems is low and deficiencies are common

- Biostimulants act to increase the availability of soil nutrients
- Biostimulants increase plant nutrient use efficiency

Stress Hypothesis (includes nutrient stress/nutrient efficiency)

Abiotic 'stress' occurs in all environments and as a consequence yield rarely reaches full potential (abiotic stress = nutrients, drought, temperature, frost, deficiency, salinity, toxicity...)

Biostimulants influence cropping system resilience by...

- Enable plants to more effectively tolerate stress
- Utilize nutrients and water efficiently

Favorably alter the plant microbiome... There are now hundreds of papers demonstrating positive responses of biostimulants on plant stress and yield. Only a few have a clear biological explanation, most do not. Plant Perception and Response to Stress occurs through Signaling and Plant Growth Regulation. Many biostimulants have been shown to affect plant stress signaling and regulatory pathways. Professor Brown discussed many different effects and actions which should be read on the Fertasa website <http://www.fertasa.co.za/fertasa-events/symposium/>

Doctor Koos Bontman gave a comprehensive overview of the importance of Boron in Agriculture.

The influence of boron deficiency on various crops are outlined in detail from scientific trials.

Visit the Fertasa to gain full insight in this excellent treatise <http://www.fertasa.co.za/fertasa-events/symposium/>

Professor Michael MacLaughlin discussed novel fertilizers with common key objectives:

- Improve nutrient acquisition by plants
- Reduce non-productive losses of nutrients to the atmosphere or waters
- Reduce long-term storage of nutrients in soil
- Improve human and/or animal nutrition
- Reduce nutrient cost
- Simplify fertilizer manufacturing
- Reduce energy use or waste emissions during fertilizer manufacturing
- Some nutrients are easily lost to the atmosphere – e.g. nitrogen (N)
- Some nutrients can be 'tied up' or stored in soils – phosphorus (P), copper (Cu), manganese (Mn), zinc (Zn)
- Some nutrients are easily leached from soils
- Acidic soils – N, sulfur (S), boron (B) and sometimes calcium (Ca)/magnesium (Mg)
- Alkaline soils – N, S, molybdenum (Mo) and selenium (Se)

Professor MacLaughlin discussed various methods to improve P, S and Zn availability and uptake. Visit the Fertasa website for the detail. <http://www.fertasa.co.za/fertasa-events/symposium/>

Professor Maarten Everaert discussed Layered Double Hydroxides (LDH) for Circular Phosphorus use in Agriculture = Inorganic anion exchange materials: divalent (Mg²⁺) and trivalent (Al³⁺) metal hydroxide layers and a negatively charged anion interlayer

- Structurally relates to brucite Mg(OH)₂
- Introduction of trivalent cations (Al³⁺)
 - positively charged layers
 - anion exchange capacity
 - exchangeable anions in interlayer
- LDH have a high affinity for PO₄ anions
 - adsorbent for PO₄
 - P desorption and reuse of LDHs questionable

The following were discussed

- Release mechanisms of P from LDH, the effectiveness of powdered LDH as fertilizer
- LDH application form determines the slow-release character of P-LDH
- P-LDHs and limiting P losses to the environment

The following conclusions were arrived at:

- P release from LDH by anion exchange (pH neutral, alkaline) or LDH dissolution (acid)
- Powdered LDH is a relatively fast-working fertilizer, with good effectiveness in calcareous soils and less strongly P-fixing soils
- Granulation of LDH = slow-release fertilizer
- Slow release of P from LDH does not increase P uptake in strongly P-fixing soils
- In acid-weathered soils, a local P saturation is required: granular soluble P
- Slow-release P-fertilizers are a tool to limit losses of P to the environment

Visit the Fertasa website for the full detail on this intriguing technology. <http://www.fertasa.co.za/fertasa-events/symposium/>

Doctor Pauline Welikhe discussed the application principles of Artificial Intelligence in the modelling of P input-output relationships in complex Agricultural systems to minimize P loss from the soil and eutrophication of water sources. Visit the Fertasa Website for all the insights in this project <http://www.fertasa.co.za/fertasa-events/symposium/>

Annemarie van der Merwe discussed findings regarding nitrogen use efficiency in the Western Cape. The focus was on regenerative agriculture involving four systems: Canola, Wheat, Lupine Wheat, Medics Wheat and Lucerne Wheat.

RIPPER TILLAGE

Equipment

www.ripper-tillage.co.za

Ripper Tillage Equipment design and develop Agricultural Equipment. Manufacturing of Riptill, Stripill equipment, Rolegland and Planter closing wheels.

When you choose Ripper Tillage Equipment, you will find a friendly and competent supplier who truly cares about your interests and building long-term commercial relationships in your yearly farming practices. As a family that has been involved in the manufacturing of agricultural equipment for the past three decades we truly understand the challenges our South African farmers are facing and hence provide equipment and services that meet needs and requirements of our customers.

A dynamic company founded in 1984 by Chris Botha, a third-generation farmer on Graspan that prides itself with the engineering and manufacturing of robust agricultural equipment designed to accommodate the

farmer's soil conditions and requirements.

Ripper Tillage Equipment was established in 2014 by Christine Brouwer second generation of manufacturers. Together with Christoff Botha we proud ourselves as a brother and sister team, delivering quality agricultural products for the past 8 years.

Our core operational activities consist of the design, retail and manufacturing of seedbed preparation products within the conservation practices of soil preparation. With the focus on an ever-changing environment, we supply everything from pre-planting tools, planting equipment to after-planting practices.

**INCREASE SOLAR PANEL
PERFORMANCE BY UP TO 15%**

HYDRASOL
SOLAR NANO COATING

HYDRASOL is a high quality hydrophobic, self-clean nano solar panel coating.

HYDRASOL has very low surface energy, anti-stick character which prevents water, dust and dirt from attaching themselves to the surface. Any debris that settles on a solar panel will be

blown away by the wind or carried away by water droplets which are strongly repelled from the surface.

The product requires no polishing or buffing. Simply wash off with clean water to produce a hard wearing, reduced stick, easy to clean, hydrophobic surface coating.

The novel breakthrough of HYDRASOL is to co-locate water repelled functional groups alongside active functional groups on nano-structured particles which bond to the resin matrix, giving a tough durable and transparent coating.

The nano-particles are smaller than the

NANOTEK

ULTIMATE COATINGS

wavelength of visible light and do not scatter light but providing a high degree of transparency.

FEATURES:

- Provides a hydrophobic layer which repels water away from the surface and keeping it dry.
- With a ceramic hardness of 9H+, it provides increased protection against hail.
- Can be applied pre or post installation of the solar panels.
- It is ecologically beneficial and biologically safe.
- It has a durability for up to 10 years.

BENEFITS:

- An easy to clean surface – less dirt and is far easier to clean.
- Optical neutrality of the surface is 100% retained.
- Protects from bird fouling and other heavy soiling sticking to the panel's surface.

The only DAM Liner with a 16 year guarantee

Flexi Linings manufacture and supply **Corrugated reservoirs, Liners** (for reservoirs, and cement and earth dams) and different **roof options**. Flexi Linings supplies the only **1000g liner (embossed with the weight and logo) in the country AND it has a 16 year guarantee!**

Our PVC liners are reinforced with polyester base cloth and are the toughest, most durable, flexible liner on the market - they are NOT tarps!

Our guaranteed liners are black and contain UV stabilisers so the liners don't get brittle and last, despite prolonged exposure to the sun. All welding is done by a high-frequency welding process ensuring it remains waterproof.

Our linings are SABS tested, so you know that your liner is safe and reliable (with no cross contamination). Flexi linings are safe for any use:

- protecting potable drinking water (safe for human and animal consumption or in dams containing fish).
OR
- for reservoirs containing toxic waste or liquid fertiliser (to prevent pollution/ contamination of the surrounding environment).

We manufacture and supply a wide range of different sized corrugated (Aluzinc) reservoirs that last a lifetime.

We also make corrugated roofs (or PVC or shade netting covers) to prevent water contamination and evaporation.

AND... we manufacture and install liners, perfectly measured and fitted (for your existing cement and/or earth dams.)

IS JOU GRANE VERSEKER?

Niemand kan die toekoms voorspel nie,
maar ons kan dit vir jou beskerm

INKOMSTEWAAARBORG

Hierdie versekeringsprodukt is gegrond op 'n gewaarborgde inkomste en verseker die produsent teen randwaarde per hektaar.

Twee veranderlikes word dus tydens eise in berekening gebring naamlik: Prys (SAFEX) en Opbrengs (Ton/ha). Dekking is vir Mielies, Sonneblom en Sojabone.

WATTER SOORT SKADE WORD GEDEK?

Droogte, Brand, Hael, Transito, Oormaat Reën, Onbeheerbare plantsiektes en -insekplae, Oormatige hittegolwe en Ryp.

IS ALLEENSTAANDE HAELDEKKING BESKIKBAAR?

Ja, IMPAC Cropsure bied ook alleenstaande haelversekering.

GEWASSE HIERONDER GEDEK SLUIT IN:

Mielies, Graansorghum, Sonneblom, Sojabone, Droëbone, Grondbone, Aartappels en Katoen.

WAT IS WINTERGEWASSE?

Koring, Gars en Hawer.

WATTER SOORT SKADE WORD GEDEK?

Hael, Brand en Transito, asook Ryp indien ingesluit.

Alpha Damme

**WE STRIVE TO GIVE OUR CLIENTS A ONE-STOP WATER STORAGE AND IRRIGATION SOLUTION!
COST EFFECTIVE QUALITY STEEL STRUCTURES**

**AT ALPHA DAMME, WE MANUFACTURE TOP QUALITY PRODUCTS.
RELIABLE SERVICE AND MARKET RELATED COMPETITIVE PRICING IS OUR GOAL.**

OUR SPECIALITIES

- Potable water tanks
- Zinc dams
- Linings for concrete zinc dams
- Firefighting water storage
- Agricultural tanks
- Pivot irrigation
- Earth dam liners

Superior quality and flexible linings for all types of dams

Prevention of algae growth

Construction of corrugated and mesh wire dams

ZINC DAMS WATER TANKS PLACE ORDERS TODAY!

We manufacture any size of zinc dams or linings on request.

Our liners are suitable for potable water tanks, a wide range of chemicals and liquid fertilisers.

We deliver nationwide, as well as to neighbouring countries,

Alpha Damme provides a 10 year warranty against faulty material and/or workmanship on all products.

Crop Quality Reports

The Southern African Grain Laboratory NPC

The Southern African Grain Laboratory NPC is an independent ISO/IEC 17025 accredited laboratory, acting as reference laboratory for the South African Grain Industry.

The **Crop Quality Division** focus on grain and oilseed quality analyses:

- Grading & Milling
- Nutritional analyses
- Rheology & Baking
- Vitamins, Minerals & Amino Acids
- Mycotoxins

The **Crop Protection Division** is also ISO/IEC 17025 accredited and OECD GLP Compliant for analyses on plant protection products:

- 5-batch testing
- shelf-life testing
- quality control

OUR LOCATION

The Grain Building,
Agri-Hub Office Park
The Willows, 0040

Bruker Optics has the industry's most comprehensive FT-NIR spectrometer product-line:

TANGO:

The next generation FT-NIR spectrometer with touch screen operation and intuitive user interface.

MPA II:

Unrivalled flexibility for your daily QA/QC work as well as for sophisticated method development.

MATRIX-F II:

On-line FT-NIR for direct measurements in continuous or batch processes, enabling a close production control.

FT-NIR SPECTROSCOPY FOOD ANALYSIS

FT-NIR is a powerful and effective technology for control of raw materials, intermediates and finished products.

The major application areas of NIR spectroscopy include dairy and meat, beverages, edible oils, bakery ingredients and condiments as well as grains and oil seeds.

In contrast to most wet-chemical and other reference methods, FT-NIR technology is quick, cost-effective, non-destructive and safe, since it does not use chemicals, solvents or gases.

Innovation with Integrity

ONTSLUIT DIE GROEN REVOLUSIE!

World Focus Agri se produkte word gebruik as 'n organiese groeistimulant dwarsdeur die plant se lewensiklus.

B4999 COMPLEX ROOT

'n Unieke kombinasie van **Organiese sure**, **Aminosure** en **Ensieme**, vir die verbetering van grondgesondheid, versterking van wortelgroei by plante en saailinge.

Boor(B)...2g/Kg, Magnesium (Mg)...1g/kg

B5089 COA FERTIGATION

'n Unieke kombinasie van spesifieke **Humaat** en **Fulvien** samestellings vir grond en groeimedium aanwending. Spesifiek geformuleer vir optimale ondersteuning van plante-voedingstowwe in die wortelsone.

Stikstof (N)...56 g/kg N, Stikstof (S)...5 g/kg

B4683 CCM

'n Ultrafyn gemikroniseerde **MG/Ca** bron in die **Karbonaat** vorm gemiddelde partikel grootte van 5 – 15Mikron

(1 000 x kleiner as die 80% van Konvensionele Landbou kalk)

Ca...190g/kg, Mg...110g/kg, Organies...30g/kg

B4990 COMPLEX CALSLU

'n Ultrafyn gemikroniseerde **Ca** bron in die **Sulfaat** vorm gemiddelde partikel grootte tussen 5 – 15Mikron

(1 000 x kleiner as die 80% van Konvensionele Landbou kalk)

Ca...230g/kg

B4682 COMPLEX CALSLU

'n Ultrafyn gemikroniseerde **Ca** bron in die **Karbonaat** vorm gemiddelde partikel grootte tussen 5 – 15Mikron

(1 000 x kleiner as die 80% van Konvensionele Landbou kalk)

Ca...400g/kg, Mg...30g/kg, Organies...30g/k

Ons is almal bekend met die konsep van massabalans en energiebalans. Enige biologiese sisteem, insluitende ons eie liggame bestaan uit 'n massabalans en energiebalans. In gewasverbouing fokus ons baie energie en koste op die massabalans deel van die plant se behoeftes; die in-balans bring van die grond en/of groeimedium in terme van nutriënte en ander toepaslike aspekte.

Die vraag bly staan hoe kan ons dan die energiebestuur doeltreffend in 'n plant doen? Ons "balanseer" al die nutriënte in die grond, maar die resultate is nie altyd soos verwag word nie. Daar vind nie welige groei plaas nie, patogene kry vasstrapplek of skadelike insekte kom besoek die gewasse vir voortplanting. Die opbrengs bly ver agter die genetiese potensiaal van die spesifieke gewas. Die oplossing vir die vraagstuk is doeltreffende energiebestuur in die plant en in die grond.

In die natuur is daar 'n paar sisteme wat die plant ook in staat stel om sy energie beter te bestuur soos byvoorbeeld die effek van metaboliete op die grondlewe. Die sleutel tot sukses lê by sekere sekondêre metaboliete wat organismes afskei.

Soos urease en glomalin, is ETP (Epipoydioxiperizine) ook veronderstel om vrylik in die natuur beskikbaar te wees. Urease is gelukkig nie 'n probleem nie. ETP is 'n ensiem afkomstig van onder meer fungusse soos onder andere trilogoderma.

'n Effektiewe sleutel tot plantenergiebestuur lê in die ETP wat die organismes as metaboliete vir die plant teruggee in die simbiotiese verhouding wanneer dit effektief in die rizosfeer aktief is.

Dit is soms moeilik om die die rizosfeer in 'n kommersiële omgewing effektief te kry sodat die lewende organismes genoegsame ETP afskei om die gewenste effek te verkry. Vir die rede kan ETP (Gliogrow) as blaarbespuiting gebruik word om die gewenste effek herhaaldelik te verkry.

Die effek van ETP op die plant is onder meer die volgende:

- Verhoogde wortelgroei aktiwiteit (aangesien die plant nog toegang tot die metaboliet wil verkry)
- Verhoogde ensiem-aktivering vir die plant se metaboliese bestuur en nutriënt-opname
- Verhoging in die konsentrasie van die komplekse plantsuikers/voedingstowwe (Brix)
- Verhoging in die konsentrasie van absesiensuur en plantsapgeleiding
- Verhoogde fotosinteseaktiwiteit;
- Balans tussen fotosintese en respirasie.

PLANT ENERGIEBESTUUR

Loadtech leads in supplying quality weighing components

OUR VALUES:

HONESTY - INTERGRITY - FAIRNESS - RESPECT

Loadtech is one of the best-known manufacturers and suppliers of load cells in Southern Africa. When it comes to specialized weighing solutions, the company has over 50 years collective experience. Founded in 1987, Loadtech Load Cells has firmly established its reputation as a leader in quality load cell manufacturing.

Whether your requirement is for custom weighing systems, applications such as force measurement, centre of gravity determination or crane weighing systems, Loadtech will provide an innovative and economical solution, staying by your side long after the sale.

Loadtech Load Cells has an accredited explosion protection rating on various locally manufactured load cells.

Technical application assistance with regard to your specific needs, and attention to detail are unmatched in the industry.

The combination of own manufacture, and the extensive range of products from Vishay Transducers, Vigia, Datum and Nobel, allows Loadtech Load Cells an unequalled degree of flexibility in offering weighing solutions.

Loadtech products range from robust industrial load cells, to the highest accuracy commercial load cells. The range extends from 300g to 500 ton with accuracies from 0.2% to 0.03%, most of which are available from stock. Where standard load cells are not suitable, special load cells, or force sensors are designed and manufactured to fit your specific needs.

ARE YOUR SEEDS COATED WITH ADVANCED TECHNOLOGY?

- AgriCOTE® Advanced Seed Technology has been in South Africa for over 20 years
- Both field and laboratory research has been performed by independent Universities for the past 15 years
- Continuous development of new coating technology in collaboration with internal partners as well as universities
- AGT Foods Africa have developed our seed coating formulations through trial and error and with international partners
- AgriCOTE® ensures ease of seed placement which makes planting more accurate
- AgriCOTE® boosts seedlings to ensure strong plants
- AgriCOTE® increases the flowability of the seed, making it more compatible with new generation planters
- AgriCOTE® ensures better seed to soil contact
- AgriCOTE® provides protection against biting and sucking insects
- AgriCOTE® promotes precision agriculture

FERTASA, CERTIFIED CREDIBILITY.

**WE STAND FOR THE PROTECTION OF THE
SUSTAINABLE USE OF FERTILIZER.**

Fertasa and its members are committed to the promotion of sustainable soil fertility and enhanced plant nutrition.

Fertasa strives to provide information on fertilizer and crop related topics. Apart from assistance with fertilizer applications, queries relating to fertilizer usage, plant nutrition and soil fertility usage, plant nutrition and soil fertility are referred to our Technical Advisers or Subject Matter Specialists for their expert opinions and advice.

Member companies and others are encouraged to share their experiences in proven techniques and novel approaches in ensuring social, environmental and economic sustainability for all.

STRUCTURE OF FERTASA

Fertasa is managed and directed by a Board of Directors who are elected by and representative of the ordinary members. The Board of Directors report to the Members which comprise representatives from all ordinary and affiliate members. The Members appoint operational committees to attend to various aspects of the business of Fertasa.

PURPOSE

Fertasa is a recognised and preferred body aimed at promoting the image of the fertilizer industry through:

- Promoting the integrity of each Member and building preferential trust for their products and services.

- Enhancing and protecting the interest of its members through effective engagement with government and organised agriculture.

BOARD OF DIRECTORS

The Board of directors manages and directs the business and affairs of Fertasa. The Board comprises six (6) directors, and one (1) executive director (the Chief Executive Officer of Fertasa).

The directors are elected by the ordinary members with equal representation from both smaller and larger member companies.

CORE FUNCTIONS

- Actively promote the agro-economic and environmentally accountable fertilizer,

WHO ARE WE?

- A code of conduct.
- A set of standards audited by an independent compliance management body.
- Quality products.
- Relevant scientifically-based recommendations.
- Continual learning and improvement.
- Complying with all legal requirements.

bio-fertilizer and aglime practices;

- Develop a positive public awareness and acceptance of the need for fertilizer, bio-fertilizer and aglime use in food production;
- Improve the operating environment within which its constituent industries operate in a spirit of free enterprise and fair trade;
- Assimilate, adds value to and disseminates fertilizer, bio-fertilizer and aglime related information;
- Provide a discussion forum for its members and other parties on all aspects relating to fertilizer, bio-fertilizer and aglime distribution, agronomic advice and product quality.
