EDITOR'S LETTER

Dear Reader

Welcome to the October | November 2021 edition of the AGRIFOODSA Magazine. This is a very exciting edition for many reasons, and so I've decided to write this one myself.

Our cover featured advertiser for this edition is Southern Hemisphere Seeds. Southern Hemisphere Seeds (SHS) was born out of the desire of a group of farmers and industry leaders to make available to the South African market the latest technologies in the world for the production of soya. This was absolutely necessary if we are willing to cope with the increasing South African needs of this product and its by-products. SOYIELD is the product from the combined efforts of farmers and seed companies to improve the soya crops of South Africa and achieving the ultimate goal of higher yields with lower input costs. Their extensive distribution network gives the producer access to the SOYIELD program across the country, ensuring support and seed on time, every time. To find out more about SHS and SOYIELD, go to <https://shs.farm/>.

Be on the lookout for our monthly AGRIFOODSA Newsletter, featuring our digital magazine, informative articles, exciting competitions and more. To sign up to our newsletter, contact info@agrifoodsa.info.

Also, be sure to head on over to our AFSA Facebook page (www.facebook.com/agrifoodsa) for more competitions, funnies, Advertiser Showcases and recipes, as well as helpful and informative articles uploaded on the daily.

Lastly, it is with great pride that I'd like to congratulate our Chief Financial and Operating Officer, Chantell, and our Marketing Manager, Louis, on the birth of their son, Louell. This is their first child and my first grandchild. Our Marketing Executive, Nicole, has also welcomed her second son into the world. He is a beautiful, healthy baby boy named Kian and our congratulations go out to her and her partner, Byron.

May your time ahead be as prosperous as ours,

Mabel Schmahl

EFFECTIVE STEWARDSHIP IN THE FERTILIZER INDUSTRY

by Dr Pieter Haumann,
CEO, Fertasa

EFFECTIVE STEWARDSHIP IN THE FERTILIZER INDUSTRY was discussed during the virtual Fertasa Soil Fertility & Plant Nutrition Symposium held on 15 September 2021.

The focus of the 2021 symposium was:

“Fertilizer Nutrient Use Efficiency”

This highly successful symposium and workshop was held on 15 and 16 September. All the presentations and discussions were conducted virtually via Zoom.

Objectives of Fertasa

The Fertilizer Association of Southern Africa strives to:

- Promote agri-economic and environmentally accountable fertilizer and aglime application practices. (Stewardship)
- Provide a discussion forum for its members and other parties on all aspects relating to fertilizer and aglime distribution, agronomic advice, and product quality.
- Assimilate, add value to and disseminate fertilizer and aglime related information.

The Fertasa code of conduct further requires that its members should promote manufacturing, crop production and product application practices with due concern for human health and the environment.

Market background

Grain SA stated recently that the only way grain production, especially maize, can continue profitably in South Africa, is when climatic conditions are very favourable and grain prices are high. The recent bumper crops with record yields and high grain and other product prices, were extremely valuable to South Africa's GDP and helped reaffirm Agriculture and the fertilizer industry, amongst other agricultural input industries, as “essential” services.

The concern, however, is that increasing input costs could render this essential industry unprofitable.

Fertilizer comprises approximately 30 to 40% of the input costs in maize production, according to Grain SA. This emphasises the importance of ensuring the efficient and effective use of fertilizer.

SYMPOSIUM

Fertasa was very fortunate to have world class scientists who shared their knowledge and expertise in managing this crucial aspect of crop production with its members and other scientists during the symposium and follow-up workshop.

The programme for 15 September dealt with formal presentations by the following:

■ **Doctor Achim Dobermann, chief scientist of the International Fertilizer Association (IFA)**

Dr Dobermann has served as Director and CEO of the renowned Rothamsted Research in the UK. He has over 30 years of field experience in every region of the world, working on science and technology for sustainable farming, with particular emphasis on soil science, plant nutrition and agronomy. He was also Professor of Soil Science and Nutrient management at the University of Nebraska-Lincoln. Dr Dobermann received a PhD in Soil Science from the University of Leipzig in Germany.

The title of his presentation was: “A New Paradigm for Plant Nutrition”

■ **Professor Ismail Cakmak from Sabanci University in Turkey:**

Professor Cakmak is a professor at the Sabanci University-Istanbul in Turkey. He has received various awards, including the IFA International Crop Nutrition Award in 2005, the International Plant Nutrition Institute Science Award in 2016, and The

Doctor Achim Dobermann

Professor Ismail Cakmak

Doctor Shamie Zingore

Professor Zin Zhang

Professor Claudia Wagner-Riddle

Doctor Tom Bruulsema

Mr. Jan van der Merwe

World Academy of Sciences 2016 Agricultural Sciences Prize.

He has published over 200 peer-reviewed journal articles which have gained him a Hirsch index of 96, with over 37 000 citations. He received his PhD at the University of Hohenheim in Stuttgart, Germany.

The title of his presentation was: "Micronutrient Uptake and Interactions"

■ Doctor Shamie Zingore from the African Plant Nutrition Institute:

Doctor Zingore is Director of Research and Development for the African Plant Nutrition Institute (APNI), based in Benguérir. He is an internationally recognized expert in soil fertility and plant nutrition management and led the pioneering work that introduced the 4R nutrient stewardship in Africa. He started his studies in Soil Science at the University of Zimbabwe and holds a PhD degree in Soil Science and Farming Systems Analysis from Wageningen University.

The title of his presentation was: "Soil Organic Matter Management and 4R Principles for NUE"

■ Professor Zin Zhang from the University of Maryland Center for Environmental Science:

Professor Zhang is currently working as Associate Professor at the University of Maryland Center for Environmental Science. Her research approaches are from both natural science, including the Earth System Model and atmospheric measurements, and social science. She holds an MA degree in Environmental Science from Peking University and a PhD from Yale University.

The title of her presentation was: "Nutrient Use Efficiencies on and Beyond Crop Farms"

■ Professor Claudia Wagner-Riddle from the University of Guelph, Canada:

Professor Wagner-Riddle is based at the School of Environmental Sciences (SES), University of Guelph, Canada. She is originally from Brazil and has degrees from the University of Sao Paulo and a PhD from the University of Guelph.

She is an expert in the application of

micrometeorological flux techniques to measure greenhouse gas emissions (GHG) from agriculture, with emphasis on nitrous oxide, a greenhouse gas associated with nitrogen fertilizer use. She is a fellow of the Soil Science Society of America, the American Meteorological Society, and the Canadian Society of Agricultural and Forest Meteorology. She was awarded the 2020 IFA Borlaug Award of Excellence in crop nutrition. With more than 150 papers, she has an Hirsch-index of >43.

The title of her presentation was: "Monitoring Nitrous Oxide Emission for Controlling N Fertilization".

■ Doctor Tom Bruulsema from Plant Nutrition Canada:

Doctor Bruulsema is Chief Scientist with Plant Nutrition Canada and provides support for the nutrient stewardship programs of Fertilizer Canada, the Fertilizer Institute, and the International Fertilizer Association. He is a fellow of the American Society of Agronomy, the Soil Science Society of America, and the Canadian Society of Agronomy. He holds a PhD in Soil Science from Cornell University.

The title of his presentation was: "The Role of the Fertilizer Industry in Enhancing Nutrient use Efficiency"

■ Mr Jan van der Merwe is an individual member of Fertasa:

Mr Van der Merwe gained valuable experience in conducting fertilizer and crop protection product trials for the Fertilizer Society of South Africa (FSSA), the University of Pretoria, and various fertilizer and chemical manufacturing companies. He also farmed for himself while developing an agricultural advisory and consultation business.

He holds a National Diploma in Agriculture (Agronomy and Soil Science) obtained from Technikon Pretoria and has completed many practical courses, including a "Masterclass Plantsapmetingen" from the University of Wageningen. He is a registered scientist at the South African Council for Natural Scientific Professions (SACNASP).

The title of his presentation was: "Plant Sap Monitoring for NUE"

WORKSHOP

A workshop was held on 16 September to discuss and evaluate various processes to enable optimum Nutrient Use Efficiency which were presented the previous day.

The presenters of the previous day composed a panel to which questions could be directed through a facilitator selected from member companies. The following aspects were dealt with:

- Role of 4R Principle and Precision Fertilizing, chaired by David Taverna-Turisan from Stoller SA.
- Role of Inhibitors, chaired by Dr Arrie van Vuuren, an individual member of Fertasa.
- Role of Enhancers, chaired by Martin Botha from NutriCo.
- Role of Biofertilizers, chaired by Dr Veronica Patterson of Omnia Fertilizer.

Discussion

Lively discussions took place between the panel and some 60 to 80 participants. Much clarity was obtained by all regarding the process of increasing Nutrient Use Efficiency.

Practical issues were widely debated. The first "R" (resource) of the 4R principle was intensively discussed and it was confirmed that this "R" could be anything from N, P, K, S, micronutrients, lime, and gypsum, to inhibitors, enhancers and biofertilisers, as well as anything in between, which could be applied at correct levels, according to defined methods, and in particular places.

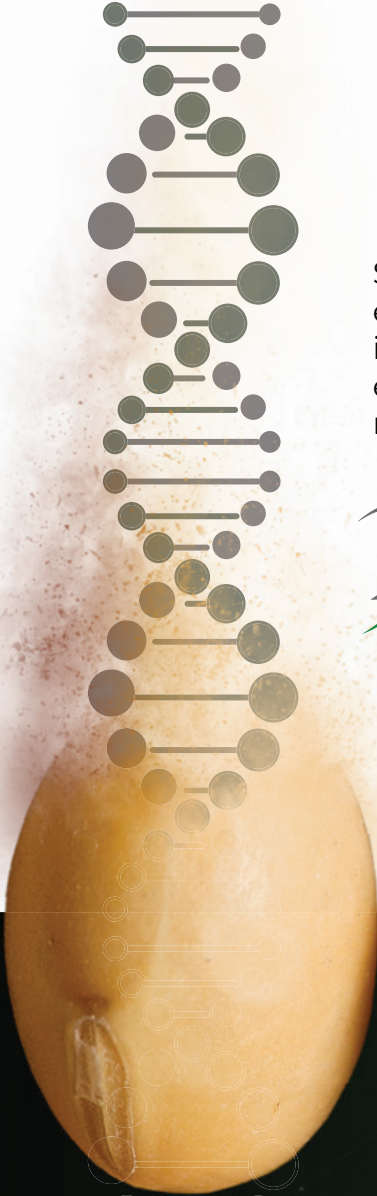

The time allocated for the discussion had to be extended by almost an hour to accommodate the flow of questions and comments.

Each presenter provided a takeaway message regarding the various topics that were discussed and deliberated.

PRESS RELEASE

THE POWER IS IN THE YIELD

Southern Hemisphere Seeds' new genetically enhanced soya bean seed range will be making its way to South African soil real soon. Keep an eye on our website or social media pages for regular updates on all we can offer you.

CHURCHES
 We are well equipped to handle the range of scopes encountered in church projects.

WORK SHEDS
 Our steel construction team can assist you with ensuring quick, safe and compliant installation of your new work shed.

STEEL STRUCTURE
 We work on small, medium and large projects from churches, warehouses, work sheds to workshops and factories.

WAREHOUSE
 SSS Steel Structures have been involved in the building and erecting of warehouses for our clients all over Gauteng.

STEEL ROOF TRUSSES
 The design options and types of steel trusses are not limited. There are also saw-tooth, bowstring, warren, etc.

AIRPLANE | HELICOPTER HANGERS
 Manufactured according to specifications. All sizes welcome.

A-GRADE MATERIALS TO ENSURE A SECURED & LASTING PRODUCT

SSS Steel Structures & construction aims to provide the best possible service to our clients at all times. We specialize in various small, medium and large steel Structures.

SSS Steel Structures are manufactured under the strictest conditions and workmanship guaranteed. Upon constructing the structure, we take into account the use of the structure, the weather conditions and the finished product. We ensure the structure is built strong, coated well and looks good.

VEILIGE, DOELTREFFENDE EN BETROUBARE VRAGBESTUUROPSLOSSINGS!

Die onderneming beskik oor die kennis en kapasiteit om die hele waardeketting van 'n kliënt te bestuur en te beheer.

Sedert die ontstaan in 2006 het LTG net gegroei en hoër hoogtes bereik. Vandag, 15 jaar later, kan LTG geklassifiseer word as 'n betroubare en uitstaande logistieke vennoot.

LTG sal enige maatskappy met logistieke behoeftes bystaan met koste effektiewe oplossings en kundige advies. LTG is altyd voorbereid vir enige besendings, hetsy seevrage, lugvrage of padvervoer behoeftes. Dit kan invoere, uitvoere of lokale vrage wees.

Ons kundige span kan enige Doeane navrae, aansoeke en klarings ook behartig. Met kantore in Rosslyn en Pomona het LTG die nodige infrastruktuur om aan al ons kliente 'n puik diens te lewer.

LTG glo in sterk, eerlike en langdurige verhoudings met sy kliente. As lede van WCA (World Cargo Alliance) groep het ons toegang tot duisende agente wêreldwyd wat goeie diens verseker.

Dienste sluit in, maar is nie beperk nie tot:

- Vragverskeping.
- Seevrage.
- Lugvrage.
- Pad- en spoorwegdienste (toegewyde en gedeeltelike vrage na Afrika).
- Inklaring | Advies.
- Pakhuise.
- Verspreiding.
- Globale konsolidasie dienste.
- Enterprise Resource Planning (ERP) oplossings.

Die onderneming bied ook dienste met toegevoegde waarde, soos:

- Verpakking.
- Herverpakking en sub-samestellings.
- Sterk klem op kliëntediens.
- Koste-mededingendheid.
- Risikobestuur.

AGRICULTURAL SHADENET

Part of the farmer's plan

For more information or a quotation, please contact us on
011 412 3954 or nets@plusnet.co.za

www.plusnetgeotex.co.za

PLUSNET

SETTING THE STANDARD IN THE SHADE NET INDUSTRY IN AFRICA

PLUSNET/GEOTEX

A Division of Master Plastics PTY , is a Gauteng based manufacturing company. Geotex was founded 25 years ago, in 1995 and the PlusNet Range was added in 2000. Today PlusNet/Geotex has a fully integrated state-of-the-art production facility that produces innovated products for the agricultural, commercial and civil industry.

AGRICULTURAL NET

PlusNet has a comprehensive range of agricultural shade netting (known as Agri+) from 20% to 60% shade, tailored to improve spectral transmittance and provide the optimal lighting and protection for your crop. Covering orchards with low-percentage shade nets can significantly improve the performance of the orchard / vineyard. Part of the responses can be attributed to the filtering of the light spectrum by the nets, and part is due to physical protection and creating a friendlier micro-climate.

DECORATIVE NET

Our range of attractive and functional decorative shade cloths (or Deco+ range) provide cover for your crops from 80% and up to 90% shade and come in a variety of colours.

The PlusNet 80% decorative range is ideal for projects where you require more shade like car ports or lapa covers. The Deco+ range is perfect for camping as you might consider using this as a privacy screen, a ground sheet or a cover around your boma area. The 80% decorative net has a UV block of 80% and provides 76% shade.

The 90% decorative range manufactured by PlusNet is specifically made for the African commercial market. We supply to hardware stores nationwide and from our factory store direct to the public.

BUSINESS

As the leading manufacturer of agricultural shade net, the PlusNet shade net product line will open up a spectrum of new and evolving opportunities for new product variants. Whether you provide shade net for vegetable tunnels, shade houses or creative 'green' initiatives, the wide range of PlusNet netting offers the client great opportunities at the best possible price.

MINI NET TUNNELS

Mini Tunnels are the quickest hassle-free infrastructure available when endeavouring to open a micro agricultural business. Net tunnels are the ideal portable, affordable do-it-yourself infrastructure for instant shade for your livestock or small gardening business. Shade tunnels come in various sizes and are simple to assemble.

The PlusNet Team is ready to assist you with your net-related queries or projects. For more information on the products, visit www.plusnetgeotex.co.za or contact us by email on nets@plusnet.co.za for your quote today.

IS GOING GREEN

CONTAIN THE COLD THIS SUMMER!

Big Box is going green with our new energy-efficient 220 V single-phase refrigerated containers. Now available as a cold room or freezer room that can store items at temperatures ranging from -20°C to 20°C .

Rental periods are flexible. Rent your refrigerated container today!

GROW BAGS

Grow bags are made from a breathable geotextile material that allows more air to the soil and drains excess water, keeping the soil moist for healthy roots and plant growth. Grow bags have less of an environmental impact than plastic pots do. This makes fabric pots ideal for high-performance feeding. For indoor crops as well as outdoors. We manufacture grow bags in a white and black material.

WHY IS THE DETAIL SO IMPORTANT WHEN TALKING ABOUT WATER APPLICATION WITH CENTER PIVOTS?

Crops are expensive to plant. If you want the highest possible yield there are a few very important factors to consider; nutrition, water, climate, etc. As this discussion is about water we will focus on detail how to irrigate as effectively as possible. This is no simple matter as effectiveness can be broken up into the following:

- The basic reliability of the machine; being there when you need it to perform! Although this is only the carrier of the very important sprinkler system an unreliable machine will leave the best sprinkler system worthless.
- The choice of a sprinkler package is one of the most important factors to consider. There are mainly three international suppliers manufacturing sprinkler systems for center pivots. All three companies manufacture cheaper as well as more expensive sprinklers for center pivot use.

Why should you not cut on your sprinkler system spending?

A static sprinkler is a cheaper simple option but has an inherent problem to control droplet sizes. Suppliers have used various techniques such as stream patterns, etc. to break the water streams up in a narrower band of droplet sizes (To coarse will compact the soil and to small will dramatically increase evaporation). On the other end of the price range you will mostly find sprinklers with movable distribution pads. The reason for this is firstly to increase the length of throw, increasing the infiltration of water in the soil by placing the water over a larger/wider area. The second reason is to "cut" the water in more evenly sized droplets. Achieving this has the following advantages. As mentioned before, to small droplets have a large evaporation loss effect; too large droplets can compact the soil. The art is in achieving the highest percentage of the ideal droplet sizes, cutting down on evaporation (up to 40% compared to some cheaper static or overhead sprinkler systems). Cheaper sprinklers cannot achieve this and have a wider variety of droplet sizes: some evaporating and others compacting the soil with a small percentage actually fitting the ideal droplet size range.

An even distribution of droplets under the complete sprinkler area is as important to the ability to have the lowest run off and the most water-in-the-soil results. With a cheaper static sprinkler water is concentrated more on the outer ring of the spray pattern, therefore concentrating water on a smaller area compared to evenly distributed droplets under the whole area. Only the best of the best products can achieve the above advantages in one product. These sprinklers usually run at 15psi (10.5 Bar) or 10psi (0.7Bar). Amazingly enough, one of the manufacturers

DINES COON SA

managed to effectively achieve the above at a sprinkler pressure of not only 10psi (0.7Bar) but also at 6psi (4.2 Bar)! The lower operating pressures result in a direct saving in energy required to pump the water to the center pivot and the precisely "engineered" droplet sizes actually getting the pumped water in the soil where it is required, more effectively. Losses of cheaper sprinklers have been measures to be as high as 43%.

Water scheduling

Irrigating the correct amount of water at the correct time is vital to the health and maximum performance of any crop. It is known that to under irrigate will have a negative effect on growth, crop performance and therefore yield. What is not as commonly known is that to over irrigate not only requires more unnecessary energy and leaches out nutrients, but a crop over irrigated will go into a rest period until the surplus water, more than field capacity, has been used or drained away, causing a loss of growth time. Having less growth time in a season will negatively impact on the yield.

To effectively achieve correct irrigation within the minimum and maximum acceptable levels, the operator must know the amount of water in the soil at any given time. By using a multi-level soil moisture probe or similar this can effectively be managed without any under or over irrigation. Correct water management reduces power usage while simultaneously increasing yield.

KWALITEIT STAALWERK

'n "Verskuifbare Lam Afrondings Kraal" is n 6m x 4.5m x 1.5m hoë struktuur met 300mm x 100mm wiele. Dit is verskuifbaar grootliks vir higiëniese doeleindes, maar ook sodat indien dit op weiding geplaas word, dit oorbeweiding voorkom.

Daar kan tot 40 lammers op 'n slag in die kraal wees. Addisionele water- en voerbakke kan aan die kant van die kamp geheg word sodat geen persone die kraal hoef binne te gaan nie.

ONS MAAK:

- Motorafdakke
- Hekkes
- Balustrades
- Staal meubels
- Omheinings
- Tenkstaanders
- Staal strukture
- Toerusting vir plaashantering

SAADBEHANDELING MET ecoANALYTICS

Nemex is ontwikkel as 'n saadbehandeling met 'n verskeidenheid mikrobies en mikro-elemente. Die gebruik van Nemex help u plante nie net om vinniger te ontkiem nie, maar help ook om die wortelmasse en gemiddelde opbrengs te verhoog. Omdat Nemex al aan die wortelsone is, terwyl dit ontkiem, kan die vrylewende stikstofbinders met die aanvang van die werk begin, namate die wortels ontwikkel om u plante lewe te gee.

Toepassing is uiters maklik en dit is nie nodig om 'n soort kleefmiddel te meng of te gebruik nie. U skeur die verpakking net oop en voeg 50g per 25kg saad of 100g per 25kg fyn saad by. Teen rondom R100,00 per 50g behandeling kan dit net 'n oorwinning in u guns wees.

BAK-CON-MAT
CUSTOM MADE CONVEYOR MATS

CUSTOM-DESIGNED RUBBER BIN MATS FOR YOUR BAKKIE!

Our mats are durable and slide resistant. They're flexible and double up as sand tracks under your wheels when you get stuck. They protect your bakkie against scratches and dents. Their aerated designs prevent water build-up, so no rust. They absorb any heavy load and spread the weight evenly. And they stay put when you unload.

MADE TO OUTLAST ANYTHING

- Strongest and most versatile rubber bin mat on the market.
- Non-slip surface to keep your cargo from sliding around while driving.
- Elevated design to keep moisture away from your load.
- Elevated design to absorb sudden impacts.

- PTO Driven

Sizes of generators we manufacture: 20kVA - 1000kVA

Knowledge grows

Verbind tot 'n wêreld
sonder voedseltekort ...
respek vir ons planeet.

As wêreldklas spesialiste in en verskaffers van anorganiese voerfosfate, aanvullings, konsentrate en voedingsgebalanseerde veevoer, streef Yara daarna om deur plaaslike kennis, internasionale kundigheid en deurlopende tegniese advies, kwaliteit en produktiwiteit, die voorste verskaffer van volhoubare gewasvoeding- en veevoeroplossings te wees wat die winsgewendheid van produsente ondersteun.

Met 'n toenemend groeiende wêreldbevolking, bly ons verantwoordelikheid om die wêreld te voed en die planeet te beskerm, ten spyte van ekonomiese hindernisse, beperkte bewerkbare grond en skaars hulpbronne.

Om sterk verhoudings met ons kliënte te smee, om in mekaar te belê en vertroue op te bou, lei tot volgehoue sukses, want ons glo ... deur saam te werk, kan ons 'n werklike verskil maak.

Any size ZincAl dam, grain dam, ZincAl tank or lining can be manufactured on request. 0.8mm to 1.2 mm ZincAl sheets with a life expectancy of 2 - 4 times longer than that of traditional sheets are used. 850 GSM PVC linings are manufactured with the aid of a high-frequency welding process. Linings are UV resistant. Material of the same thickness is used for the walls and the floor. Should the thickness differ, you get your lining free.

FERTASA

Fertilizer Association of Southern Africa

FERTASA, CERTIFIED CREDIBILITY.

**WE STAND FOR THE PROTECTION OF
THE SUSTAINABLE USE OF FERTILIZER.**

**FERTASA AND ITS MEMBERS ARE COMMITTED TO THE PROMOTION OF
SUSTAINABLE SOIL FERTILITY AND ENHANCED PLANT NUTRITION.**

Fertasa strives to provide information on fertilizer and crop related topics. Apart from assistance with fertilizer applications, queries relating to fertilizer usage, plant nutrition and soil fertility usage, plant nutrition and soil fertility are referred to our Technical Advisers or Subject Matter Specialists for their expert opinions and advice.

Member companies and others are encouraged to share their experiences in proven techniques and novel approaches in ensuring social, environmental and economic sustainability for all.

SCAN ME

WHO ARE WE?

- A code of conduct.
- A set of standards audited by an independent compliance management body.
- Quality products.
- Relevant scientifically-based recommendations.
- Continual learning and improvement.
- Complying with all legal requirements.

Structure of Fertasa

Fertasa is managed and directed by a Board of Directors who are elected by and representative of the ordinary members. The Board of Directors report to the Management Committee which comprises representatives from all ordinary and affiliate members. The Management Committee appoints operational committees to attend to various aspects of the business of Fertasa.

Purpose

Fertasa is a recognised and preferred body aimed at promoting the image of the fertilizer industry through:

- Promoting the integrity of each member and building preferential trust for their products and services.
- Enhancing and protecting the interest of its members through effective engagement with government and organised agriculture.

Mission

To provide a credible platform to promote the responsible and sustainable use of fertilizers.

Vision

To be recognised as the representative voice for the fertilizer industry and as the stamp of approval for responsible and sustainable soil fertility and plant nutrition in Southern Africa.

Board of Directors

The Board of directors manages and directs the business and affairs of Fertasa. The Board comprises six (6) directors, and one (1) executive director (the Chief Executive Officer of Fertasa).

The directors are elected by the ordinary members with equal representation from both smaller and larger member companies.

Core Functions

- Actively promote the agro-economic and environmentally accountable fertilizer and aglime practices;
- Develop a positive public awareness and acceptance of the need for fertilizer and aglime use in food production;
- Improve the operating environment within which its constituent industries operate in a spirit of free enterprise and fair trade;
- Assimilate, adds value to and disseminates fertilizer and aglime related information;
- Provide a discussion forum for its members and other parties on all aspects relating to fertilizer and aglime distribution, agronomic advice and product quality.
