EDITOR'S NOTE

Spring has sprung like cosmos from the ground and summer is just around the corner. Fresh cut grass, iced tea, bare feet and the September/October 2016 edition of the AGRIFOODSA Magazine to peruse on a rare, lazy afternoon.

In this issue, we embrace the changing of the season by welcoming an even more diverse, yet relevant bunch of advertisers into our pages to assist farmers and agricultural enthusiasts in growing to new heights of success and prosperity.

How many of you have ever seen something you are interested in on paper, immediately searched for it on Google, but ended up frustrated when the information was nowhere to be found? We know the feeling, and it has to change too! That's why we're very proud and excited to announce the launch of our revamped AGRIFOODSA.INFO website. With improved search functionality, an expanded database, latest news, special offers from advertisers and enticing competitions, you don't have to stumble about the Internet in search of what you need. www.agrifoodsa.info is launching in November 2016!

It is with grateful hearts that our budding bouquet of staff members are being rearranged to welcome back a familiar face to the team: Ida von Zweel. Ida will reprise her role as Office & Accounts Manager and her contact details are available on this page.

We are a group of passionate people who work together as a team to create the best product our readers and advertisers could ask for, so to ensure that we live up to your expectations, I would like to encourage you to contact us via email or any of our social media pages with requests or recommendations on changes or improvements.

Throughout this changing season, be sure to appreciate the "blossoms" in your life and embrace the beauty all around.

Hoe gaan ons 'n groeiende bevolking voed?

Biotegnologiese gewasse en die voedsel- en veselprodukte wat daaruit gekweek word, is van die gewasse wat die meeste op grootskaal getoets, getipeer en gereguleer word. Na 20 jaar van produksie en meer as 2,5 miljard hektaar wêreldwyd, was daar nog geen nadelige effekte gedokumenteer van die voedsel wat gekweek is van biotegnologiese gewasse nie. Te danke aan maatskappye soos Monsanto is ons verseker van veilige, gesonde voedsel wat volhoubaar geproduseer word.*

GRAS VIR AFRIKA

Brachiaria Brizantha

Brachiaria

Matsuda het Marandu veredel onder Brachiaria MG-4 om meer droogtebestande eienskappe as Marandu te bied. MG-5 Victoria is ook 'n veredelde Marandu wat 'n beter opbrengs, droogtebestandheid en goeie hergroei na beweiding bied. Victoria kan in vleiagtige grond met swak dreineringsseienskappe gevestig word. Dit is geskik vir droë lande met 'n opbrengs van 10 tot 14 ton DM/ha/jaar.

Pennisetum (banagras)

CARAJAS – 'n verbeterde banagras wat met saad gevestig kan word.

- Geselekteer vir 'n hoër droëmateriaalopbrengs, vinniger hergroei, hoër proteïene en beter verteerbaarheid.
- Hierdie olifantsgraskruising is uiters bestand teen koue en matig tot hoog droogtebestand.
- Baie smaaklik en uiters geskik vir beweiding, asook kuilvoer.
- Kuilvoeropbrengs van meer as 100 ton materiaal (40 tot 50 ton droog) per hektaar per jaar is moontlik onder ideale toestande.

Peulplante

Java is 'n meerjarige peulplant wat heeljaar baie saad produseer en dit voeg 150kg stikstof per hektaar per jaar terug in die grond. Die peulplant kan in arm grond gevestig word en het hoë droogteweerstand. Dit is smaaklik, het 'n proteïenwaarde van 18 tot 23% en lewer goeie hergroei ná beweiding.

Panicum Maximum (witbuffel)

Geskik vir besproeiing met 'n opbrengs van 19 tot 30 ton DM/ha/jaar.

Panicum Maximum-kruis

Panicum Maximum-kruis

Geskik vir wild en koue toestande. Opbrengs 15 tot 20 ton DM/ha/jaar.

Aries is 'n hibried van *P. maximum Aruana* en *P. maximum Centauro*. Aries is koue- en droogtebestand en toon goeie hergroei na beweiding. Dit is 'n uiters smaaklike gras en geskik vir beeste, perde, skape en wild.

OMGEWINGSVRIENDELIKE PLAAGBEHEER

Onoortreflike gehalte en professionele diens – in Suid-Afrika geteel vir Suid-Afrikaanse vlieë

Hoe werk hierdie program?

Vliegparasiete (*Muscidifurax raptor*) word in 'n insektarium geteel en is beskikbaar in pakkies van 5 000. Hierdie parasitiese wespes word gereeld by vliegbroeiplekke op die plaas losgelaat. Die volwasse wesp steek die papie van die vlieg, dood dit in die proses en lê eiers in die papie. Die eiers teer op die dooie vliegpapie en ontwikkel in 'n wespe. Die wespes broei binne 19-21 dae uit en begin dan die soektog na vliegpapies as voedsel en waarin hulle kan eiers lê.
